Our values

Loyalty

Responsibility

Excellence

Innovation

Integrity

Teamwork

Capacity to respond

Vocation to serve

We are a solid organisation whose professionals carry out their work with total commitment to their clients, with sensitivity to their needs and affording them confidence and security.

The fundamental principles that MDE maintains and lives by are the basis of the activities and attitudes of our team and our collaborators.

Our vision

To be a leading company in total construction projects at an international level providing our clients with globally competitive standards of quality and reliability

Our Mission

Our principal contribution to society is the transformation of the environment for common progress and the improvement of wellbeing.

We work day after day with this aim in mind, constantly looking for the processes which will allow us to be the most productive and efficient. Obtaining the greatest benefits for our clients and our collaborators is our reason for being.

Two decades of success in construction and projects

Mantenimiento de Estaciones S.L. (MDE) was founded in 1992 thanks to the initiative and enthusiasm of a young generation which came from a long family tradition in the world of construction and took on the difficult challenge of constructing and maintaining the railway infrastructure without disrupting its traffic.

From its beginnings MDE has transferred its experience in the demanding Spanish rail sector to other public bodies and the private sector, with its principal competitive strengths being quality, meeting deadlines and security. The success of its management model has allowed it to take on major projects of public, residential and industrial construction as well as civil works and rehabilitation.

Today MDE can tackle construction projects all over the world, thanks to a management system which guarantees the total satisfaction of the client. Attending in the optimum manner to areas as important as the professionalisation of the work team, the contribution of suitable resources, technological security, preoccupation for the protection of natural resources and the constant improvement of working conditions.

CONSTRUCCIONES
Y PROYECTOS

MDE

We construct excellence in all fields

MDE is able to bring exceptional quality to all areas of construction, thanks to our unique and highly specialised management system which allows us diversification and integration of the work model.

Residential building

Quality of life, for life.

Because the purchase of a home is a decisive step in the life of a family, we take maximum care over every detail of the design.

Public building

Singular projects.

Together with local, regional and national government we contribute to improving the quality of life of our citizens and promote social development.

Singular constructions such as schools, hospitals, shopping centres, sports centres etc which, because of their architecture, design and functionality become places for encounters and service.

MDE

Rehabilitation and adaptation

Habitability, accessibility and functionality.

MDE has long experience in the execution of restoration projects on buildings of artistic value, and also the adaptation of public spaces to new standards of accessibility as well as the adaptation of industrial spaces and workshops to new uses.

We participate enthusiastically in these projects because we understand that it gives us the opportunity to conserve existing resources and preserve the best of tradition for future generations.

Industrial construction

We guarantee to meet the requirements of projects.

Numerous industrial companies of all sectors, as well as public bodies trust in our technical capacity to realise industrial construction projects. MDE offers a complete service of construction, equipping and installation which incorporates the most modern systems and resources along with the strict fulfilment of deadlines and optimal quality conditions.

The work of MDE in Industrial Construction encompasses a great diversity of activities:

- Buildings of advanced design.
- Mixed-use construction (storage-offices).
- Logistics and distribution buildings.
- Special construction.

The result, work which combines to perfection design with functionality.

Civil works

Experience and capacity.

The experience and capacity of the professionals of MDE, who come from different fields of engineering and construction, allow us to take on civil projects in a multitude of areas: roads, hydraulic works, railways, ports, bridges etc.

We are currently on the registry of officially classified suppliers for public works and regularly carry out works and services for rail operators such as ADIF, RENFE, Regional Railways of Valencia (FGV), etc.

The key to our professional know-how: a combination of thoroughness and experience focussed on rigorously keeping to deadlines and providing maximum quality, whilst guaranteeing work safety and the efficient use of resources.

A vocation to serve

Complete maintenance of buildings and installations.

MDE have the resources and the qualified personnel at our disposal to create and maintain installations, which allows us to take an integrated approach to whatever project, be it in the residential, service or industrial fields.

Conservation of infrastructure.

The maintenance of public infrastructures is the key to guaranteeing the correct provision of service for which they are designed, as well as protecting the major investment associated with their construction.

MDE is proud to contribute to this task, which requires a high level of resources for the maintenance of such demanding transport infrastructures as, for example, the rail network. Thus we undertake numerous preventative and corrective infrastructure and railway maintenance jobs, work in forests to preserve the roads and tracks and prevent forest fires etc.

Our experience in carrying out work which involves disruption to rail traffic guarantees our preparation and know-how in this singularly demanding environment.

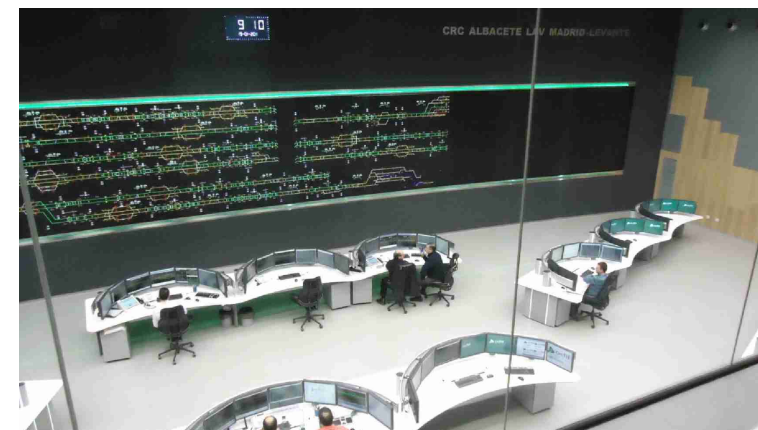

Experience and innovation.

The internal organisation of MDE is distinguished by its agility, dynamism, specialisation and capacity to adapt to the necessities of the client and the characteristics of the market it is operating in.

This has allowed us to participate in the most important public investment projects in Spain of recent years.

Madrid - Valencia High-speed rail link.
